## Non-Medical Exemption Form (Religious and Personal Belief)

Vaccines are one of the greatest public health achievements of the past century and save an estimated 3 million children's lives every year. The Colorado Department of Public Health and Environment strongly supports vaccination as one of the easiest and most effective tools in preventing diseases that can cause serious illness and even death. For nearly all children, the benefits of preventing disease with a vaccine far outweigh the risks. Declining to follow the advice of a health care provider, or public health official who has recommended vaccines may endanger an unvaccinated child's health and others who come into contact with him/her. Some vaccine-preventable diseases are common in other countries and unvaccinated children could easily get one of these diseases while traveling or from a traveler.

Colorado law C.R.S. § 25-4-902 requires all students attending any school in the state of Colorado to be vaccinated against certain vaccine-preventable diseases as established by Colorado Board of Health rule 6 CCR 1009-2, unless an exemption is filed. This law applies to students attending child care facilities licensed by the Colorado Department of Human Services, public, private and parochial kindergarten, elementary and secondary schools through 12<sup>th</sup> grade, and colleges or universities. Prior to kindergarten, a non-medical exemption must be filed each time a student is due for vaccines according to the schedule developed by the Advisory Committee on Immunization Practices.<sup>1,2</sup> From kindergarten through 12<sup>th</sup> grade, a non-medical exemption must be filed every year during the student's school enrollment/registration process<sup>1</sup>. **Students with an exemption may be kept out of child care or school during a disease outbreak.**

## Vaccine Preventable Disease Information

The information provided below is to ensure parents/guardians/students are informed about the risks of not vaccinating.

**Diphtheria, tetanus, pertussis (DTaP, Tdap)** - Unvaccinated children may be at increased risk of developing diphtheria, tetanus and/or pertussis if exposed to these diseases. Serious symptoms and effects of diphtheria include heart failure, paralysis, breathing problems, coma, and death. Serious symptoms and effects of tetanus include "locking" of the jaw, difficulty swallowing and breathing, seizures, painful tightening of muscles in the head and neck, and death. Serious symptoms and effects of pertussis (whooping cough) include severe coughing fits that can cause vomiting and exhaustion, pneumonia, seizures, brain damage, and death. **Haemophilus influenzae type b (Hib)** - Unvaccinated children may be at increased risk of developing invasive Hib disease if exposed to this disease. Serious symptoms and effects include bacterial meningitis, pneumonia, severe swelling in the throat, permanent neurologic damage including blindness, deafness, and mental retardation, infections of the blood, joints, bones, and covering of the heart, and death. For more information: <http://www.cdc.gov/vaccines/hcp/vis/vis-statements/hib.pdf>
